Formula & DIAB - The perfect partnership

The new Formula 47.

DIAB Inc. has been working closely with the team at Formula Boats for many years providing structural core materials for both its racing powerboats and luxury motor yachts. The latest addition to their range, the Formula 47, continues this cooperation with the extensive use of DIAB cores in the hull deck and superstructure to provide a lightweight yet high strength construction that is virtually maintenance-free and will last for years.

The 47 (which is the first 'yacht class' vessel produced by the company) continues a long-standing tradition of elegant design and advanced engineering that is the hallmark of every Formula craft. Designed by John Adams, it is 50 feet overall with a 14 foot beam and is powered by a choice of twin 480 or 660 h.p. diesel engines that can provide a top speed of up to 37 knots. There is little doubt that its sweeping lines are likely to command immediate attention whether at the quay side or on the water.

Accommodation aboard is both spacious and luxurious with a large main saloon and two staterooms plus a cockpit area that will seat up to eight people in total comfort. A full-width hydraulic swim platform is also provided that has been designed to accommodate the latest generation of personal watercraft.

The 47 is built at the company's 'state of the art' 500,000 sq. ft. manufacturing facility in Decatur, Indiana.
