Bear Fiberglass Bodies

Bear Fiberglass of Kelowna, BC, Canada is one of North America's premiere manufacturers of fiberglass street rod bodies and associated parts. As can be seen by these multi-prize winning vehicles above and below, the end results are stunning to say the least.

The bodies produced by Bear Fiberglass are not cosmetic shells. They are engineered and manufactured to offer a very high level of structural integrity in their own right coupled with light weight 'on the road' performance. As a result a Bear-crafted body is exceptionally stiff and will not spider web or crack over time. To achieve these performance levels, Bear rejects the use of wood or steel for reinforcements and instead makes use of sandwich composite technology based on DIAB polymer cores in all critical areas. For example, the floor pan features one inch thick DIAB core. Similarly, all exterior panels are 'DIAB reinforced'. As Bear Fiberglass puts it, 'all of our bodies are built right and fit tight'.
