Mitsubishi L200 Evolution - Off-road sports pick-up

The Mitsubishi L200 Evolution

The L200 Evolution is a limited series production, off road, high performance, sports pick-up that has been launched by Mitsubishi Motors of Brazil. It features a host of technical innovations including the use of Divinycell sandwich composites for the body shell. All up weight of the body shell is just 50 kgs.

It is powered by a 16 valve, 3.2 liter turbo diesel engine, with electronically-controlled direct injection that delivers 168 horsepower. The suspension system (eight shocks and eight struts) is identical to the one that was used on the Mitsubishi vehicle that won the 2000 Paris-Dakar rally.

In July 2001 the L200 completed the gruelling challenge of the International Rally of Sertoos. This event involves negotiating more than 5,000 kilometers of off-road trails between Sao Paulo and Fortaleza in Brazil.
